

# Demonstrate

Since we are not using synthetic biology but common chemical reaction approaches to prepare for the ginsenoside hydrolysate, in order to demonstrate the effectiveness of our method and final products, as ginsenosides are considered as **GRAS** (Generally Regarded As Safe) cosmetic ingredients in China, we contracted government-certified **ODM** (Original Design Manufacturer) to prepare skin lotion samples containing our ingredients. The **DIY** (Do-It-Yourself) samples were well received and accepted by end-users for several years.
